Proofpoint Threat Response v4.2.1
Release Notes

October 2018

Release Summary:

Threat Response 4.2.1 is a release with bugfixes and some minor enhancements.

Please refer to the following for more detailed information:

1. Enhancements and Improvements
2. Download Instructions

Recommendations:

As with any software upgrade it is recommended that a full system backup be created prior to starting the upgrade. Backups can be initiated in the Appliance Management Console. This backup, as well as an export of the Master Secret, should be downloaded and stored in a secure location.

If any issues are encountered during or after upgrading, please open a support ticket at: https://proofpointcommunities.force.com/

Enhancements and Improvements

The following bugs have been resolved:

- "Bulk Action" response dialogue box would delay for extended periods of time when multiple incidents were selected.
- High Volume Automatic Quarantine Responses were failing to process due to event receiver timeout when identifying if event correlations were needed.
- Custom Responses would cause the Threat Response UI to hang in a "Processing" when the system itself had experienced an internal error.

- Abuse Mailbox Monitor would occasionally report the abuse mailbox address as the reporter instead of the targeted user.
- Resolved issue with latency in navigating across multiple incidents
