

# Proofpoint Threat Response 4.6.1 – Release Notes

## June 2019

### Overview

Proofpoint Threat Response (PTR) and Threat Response Auto Pull (TRAP) 4.6.1 deliver fixes to critical defects affecting 4.6.0. Customers running PTR/TRAP 4.6.0 are strongly advised to upgrade to 4.6.1.

### Defect Fixes

#### **CLEAR re-analysis submissions with PhishAlarm are not reflected in PTR/TRAP**

In PTR/TRAP 4.6.0, abuse messages reported with the PhishAlarm button and submitted for re-analysis by PhishAlarm Analyzer were not being tracked inside a PTR/TRAP incident. As a result, the incident did not reflect the updated abuse disposition after re-analysis and may not have triggered appropriate responses.

PTR/TRAP 4.6.1 fixes this issue by correctly tracking messages submitted for re-analysis by PhishAlarm Analyzer and sets any updated abuse disposition that will be used to trigger appropriate responses.

Notably, abuse messages reported via manual forwards were/are unaffected by this issue.

#### **Improved times for upgrades**

PTR/TRAP 4.6.1 contains a fix for an issue where upgrades to 4.6.0 in some cases took several hours to complete, because of a slow-running database migration task. The task has now been sped up significantly via performance improvements made with this fix.

#### **Proxy usage in Azure AD/Modern Auth configuration**

PTR/TRAP 4.6.1 contains a fix for an issue wherein a proxy connection to Office-365 via Azure AD and Modern Auth did not work. The fix ensures that proxy connections to Office-365 are handled correctly.

### Download and Upgrade Instructions

PTR/TRAP 4.6.1 requires a minimum of VMware ESXi 6.0. Please use Proofpoint CTS credentials to access downloaded images.

4.6.1 OVA File (Fresh Installs Only)
